

American Biosoils & Compost was created in 2010 with the intent of diverting organic wastes from landfills.

We accept a variety of organic wastes to then manufacture products such as biosoils, compost, mulch and garden soils for a higher and best use.

**Biosoils:** American Biosoils & Compost has the ability to manufacture Bioretention Soil Mixtures to meet the specifications of a particular application, or provide pre-manufactured infiltration soils and growing media mixtures.

**Compost Mulch Product:** A manufactured compost mulch product aged, cured and composed of locally produced or harvested biomass materials, which contains no spent mushroom soils, sewage sludge or biosolid materials. Avoiding these materials allows our finished product to provide optimal growing conditions for vegetation and stabilization, without interference by high soluble salt content.

The mineralized compost product produces an end material with a high Cation Exchange Coefficient, allowing the biosoils mixtures the ability to sequester pollutants from storm water runoff.

This material would be eligible for **LEEDS CREDITS** for locally produced, extracted and manufactured products as well as recycled products.

### PROVIDING:

- Manufactured Soils
- Compost Mixtures
- Mulch Mixtures
- Biosoil Mixtures
- Unlimited Outbound Volume Capacities
- On-Site Manufacturing Available
- Garden / Planting Soils

### ACCEPTING:

- Yard Waste
- Food Waste\*
- Manure\*
- Biomass\*

*\*Not available at all locations.*
